

I am concerned that the LPFM service may have adverse effect on FM translators. Specifically those used by the K-LOVE family of stations heard over many of the translators. It is the primary radio station my family and many of my friends use. It provides a no-cost vehicle where public service announcements both national & local get broadcast. It ties my local church ministry to other churches in the country who have a common vision. Suffice it to say that we would be opposed to any action that could either reduce the ability to receive K-LOVE's signal or any action that would increase the cost for K-LOVE to use translators in our listening area. We receive the current signal at 91.3 FM in San Antonio, TX.

Sincere regards,

Brad Hunt
